

EPA Science Forum

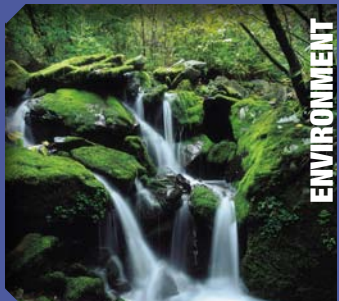

2008

Innovative Technologies

Key to Environmental and Economic Progress

Ronald Reagan Building and International Trade Center, Washington, DC
May 20-22, 2008

The 2008 EPA Science Forum will emphasize the theme of innovative technologies and their application to a healthy and prosperous environment. Through plenary talks, thematic breakout sessions, a technology expo and exhibits, participants will learn about the role of technology in environmental protection as well as the economic success of our nation in the global environment.

The Science Forum will focus on the following three tracks:

Technology Advances and Future Directions, including sessions on environmental monitoring, clean technologies, air pollution control and more.

Energy, Climate, and the Environment, with emphasis on Agency activities in the areas of energy, climate change and the environment...all priority focus areas of the EPA Administrator.

Water Systems Infrastructure and Security, introducing technical solutions to improve the Nation's aging water and wastewater infrastructure and advancements in water protection and security.
